Stainless steel thick film heating technology for instant and illimited heat of water.	New Technology LED UVC sterilization.	Smart built-in programme for cleaning of filters and tubes.

Filtration system : 3 stages*

Instantly transforms tap water into a great tasting water with no installation or permanent fixtures. The 3 stages filter will remove particles and chemicals product in your tap water to enable you to drink the safest UV sterilised cold water.

Cartridge filters

1st Stage

Sediment & Carbon Block Composite filter

Sediment (1 Micron): Removes mud, Dirt, lime, sand, rust and fine particles.
Carbon Block : Removes chlorine, volatile organic compounds (VOC), organic and inorganic impurities. Special polyphosphate removes limescale, dirt, silt and other particles bigger than 1 micron.

2nd Stage

Ultra Filtration Membrane & ACF Composite filter

Ultrafiltration (0.01 Micron): Removes up to 99.9999% of bacteria, E.coli, parasites cysts and viruses.
Activated Carbon Fiber (ACF): Further absorbs chlorine, colors and bad odors and greatly improves the taste of the water.

3rd Stage

LED UVC sterilization

Consisting of ultraviolet sterilizer which eliminates any bacteria, virus and micro-organisms - 20,000 hours high efficient sterilization.
