Height (cm)	45		
Width (cm)	20	An inexpensive way of obtaining purified water	NSF certified material
Water inlet	1/4"		
Max pressure	85 PSI		

UV Light

One inexpensive and efficient way of disinfecting the water supply is by irradiating it with UV light. It's known that UV light of wavelengths between 250 and 270 nanometers (UV-C or UVC band) is extremely effective in killing many species of bacteria, mold spores, viruses and other microorganisms.
